

product name
CELLFIX

Cellfix combination of Phosphorus and Cell walls. during yeast production to get gluten, yeast cells are exposed to the enzymatic hydrolysis process. End of the process all yeast cells are exploded and release the solutions. They are the structure of green plants. a kind of bio energy called as "Ready to use". This material fixes all plant problems very easily and heals. Increase resistance level of plant and keep it from climatic problems. Cellfix is enriched by phosphorus, why? When we find out a stronger plant we have to fix it for new rooting so stop vegetative growth and providing good harvest we need more flowering. After 3 applications from drip irrigation, if you support fertigation program by potassium nitrate, result; marvellous fruits and hardest plant tissues. We always advise foliar application, why? , in case sometimes roots could be damaged and have absorption problems, the best way to fix problems by foliar. However the cells do not have receptors for pheromones, Cellfix makes pressure on them to divide. The cells receive the code as pheromone of division.

dosage of
CELLFIX

healer and great cure for greens
2Kg./ hectare for foliar application (mix plant nutrients)
10Kg. drip irrigation for soil applications

ingredients of
CELLFIX

Phosphorus Pentoxide 20% (w/w)
Cellwalls Powder 5% (w/w)

pH 1-3

Notes:

Beige Liquid physical form
All growth period it can be applied
Max. 10 applications till harvest
No residue, less using
Keep air-tight packages
advised to use alone

EXPLODED CELL WALLS UNKNOWN PHEROMONE FOR CELL DIVISION AND PLANT STRUCTURE

**PHEROMONE
PLANTSTRUCTURE
ROOTING**

pH 1-3

try once, always use...
